Allowed Total (Dead + Live) Uniform Load (PSF)

Notes:
1. Load tables are calculated using sectional properties based on the steel design thickness shown in the Steel Deck Institute (SDI) Design Manual.
2. Loads shown in the shaded areas are governed by the live load deflection not in excess of 1/240 of the span. A dead load of 10 PSF has been included.
3. 3N, NI, NA, NIA are not covered under Factory Mutual.
Steel Decks

  - composite concrete
- non-composite
  - concrete is fill
- lateral bracing
- diaphragm action
