Iron & Steel Trusses

- cast iron
  - 18th century
  - chain links
- wrought-iron
- rivets

Truss Connections

- gusset plates
- bolts
- welds

Trusses

- require lateral bracing
- consider buckling
- indeterminate trusses
  - extra members
    - diagonal tension counters
  - solvable with statics
    - cables can’t hold compression
  - displacement methods
    - elastic elongation
  - too few members, unstable
Manufactured Trusses

- open web joists
- parallel chord

  - K Series (Standard)
    - 8-30" deep, spans 8-50 ft
  - LH Series (Long span)
    - 18-48" deep, spans 25-96 ft
  - DLH (Deep Long Spans)
    - 52-72" deep, spans 89-144 ft
  - SLH (Long spans with high strength steel)
    - pitched top chord

Steel Trusses

Web Bearing
- max loads
  \[
  P_{n(max-end)} = (N + 2.5k)F_y t_w \\
  P_{n(max-interior)} = (N + 5k)F_{yw} t_w
  \]

Space Trusses
- 3D with 2 force bodies and pins
  - pyramid
  - tetrahedron
- “frames” have fixed joints
- layers
- 40’s

Space Trusses
- connections
- supports
Space Trusses

Tensegrities
- 3D frame
- discontinuous struts
- continuous cables

Method of Sections
- relies on internal forces being in equilibrium on a section
- cut to expose 3 or less members
- coplanar forces $\Sigma M = 0$ too

Free Ride Home – Kenneth Snelson
Method of Sections

- joints on or off the section are good to sum moments
- quick for few members
- not always obvious where to cut or sum
