<tbody>
<tr>
<td>Supports for Co-planar Structures</td>
<td>Note Set 2.1, 47</td>
</tr>
<tr>
<td>Geometric Properties of Areas</td>
<td>Note Set 2.1, 50</td>
</tr>
<tr>
<td>Elastic Moduli of Selected Materials</td>
<td>Note Set 2.2, 65</td>
</tr>
<tr>
<td>Coefficients of Thermal Expansion</td>
<td>Note Set 2.2, 68</td>
</tr>
<tr>
<td>Theoretical and Recommended Effective Length Factors</td>
<td>Note Set 2.2, 70</td>
</tr>
<tr>
<td>Factors for Conversion of Units</td>
<td>Note Set 2.3, 77</td>
</tr>
<tr>
<td>Units of Measurement: SI System</td>
<td>Note Set 2.3, 77</td>
</tr>
<tr>
<td>Units of Measurement: U.S. System</td>
<td>Note Set 2.3, 78</td>
</tr>
<tr>
<td>IBC Example: Allowable Height and Building Areas</td>
<td>Note Set 3.1, 81</td>
</tr>
<tr>
<td>IBC Example: Fire-resistance Rating Requirements for Building Elements</td>
<td>Note Set 3.1, 82</td>
</tr>
<tr>
<td>IBC Example: Fire-resistance Rating Requirements for Exterior Walls based on Fire Separation Distance</td>
<td>Note Set 3.1, 82</td>
</tr>
<tr>
<td>International Building Code Adoption Map</td>
<td>Note Set 3.1, 85</td>
</tr>
<tr>
<td>Risk Category of Buildings and Other Structures for Flood, Wind, Snow, Earthquake, and Ice Loads</td>
<td>Note Set 3.2, 88</td>
</tr>
<tr>
<td>Building Material Weights</td>
<td>Note Set 3.3, 93-94</td>
</tr>
<tr>
<td>Minimum Uniformly Distributed Live Loads, $L_o$, and Minimum Concentrated Live Loads (from International Building Code)</td>
<td>Note Set 3.4, 95</td>
</tr>
<tr>
<td>Live Load Element Factor, $K_{LL}$</td>
<td>Note Set 3.4, 96</td>
</tr>
<tr>
<td>Ground Snow Loads, $p_s$, for the United States</td>
<td>Note Set 3.4, 98</td>
</tr>
<tr>
<td>Deflection Limits</td>
<td>Note Set 3.4, 100</td>
</tr>
<tr>
<td>Beam Diagrams and Formulas (for various static loading conditions)</td>
<td>Note Set 4.1, 107-113</td>
</tr>
<tr>
<td>Live Load Element Factor, $K_{LL}$</td>
<td>Note Set 8.1, 175</td>
</tr>
<tr>
<td>Reduction Multiplier (RM) for Live Load</td>
<td>Note Set 8.1, 176</td>
</tr>
<tr>
<td>Moment and Shear Coefficients for Continuous Beams and One-Way Slabs</td>
<td>Note Set 8.1, 177</td>
</tr>
<tr>
<td>Minimum Thickness for Two-Way Slab Systems</td>
<td>Note Set 8.1, 178</td>
</tr>
<tr>
<td>Moment Coefficients for Two-Way Slab Systems</td>
<td>Note Set 8.1, 181-182</td>
</tr>
<tr>
<td>Openings Permitted in Slab Systems without Beams</td>
<td>Note Set 8.3, 194</td>
</tr>
<tr>
<td>Bending Moment (Coefficients) in Rectangular Plates</td>
<td>Note Set 8.4, 195</td>
</tr>

</table>
ASTM Standard Reinforcing Bar Information ........................................... Note Set 10.1, 205
Maximum Reinforcement Ratio $\rho$ .................................................. Note Set 10.1, 207
Strength Curves ($R_n$ vs $\rho$) for singly reinforced rectangular sections .... Note Set 10.1, 207
Minimum Thickness of Nonprestressed Beams or One-way Slabs unless Deflections are
   Computed (Table 7.3.1.1) ................................................................. Note Set 10.1, 209
ACI Provisions for Shear Design (Table 3-8) ....................................... Note Set 10.1, 210
Alignment Chart for Effective Length of Columns in Continuous Frames
   ............................................................................................................ Note Set 10.1, 215
Factored Moment Resistance of Concrete Beams, $\phi M_n$ with $f'_c = 4$ ksi, $f_y = 60$ ksi
   ............................................................................................................ Note Set 10.1, 216
Column Interaction Diagrams .............................................................. Note Set 10.1, 217-218
Beam / One-Way Slab Design Flow Chart ............................................ Note Set 10.1, 219-220
Dimensions of Forms for One-Way Joist Construction ......................... Note Set 10.3, 225
Dimensions of Forms for Two-Way Joist Construction ......................... Note Set 10.3, 226
Maximum Reinforcement Ratio $\rho$ .................................................. Note Set 10.4, 229
Total Areas for Various Numbers of Reinforcing Bars ......................... Note Set 10.4, 229
ASTM Standard Reinforcing Bars ..................................................... Note Set 10.4, 230
Minimum Thickness of Solid Nonprestressed One-way Slabs ............... Note Set 11, 234
Strength Curves ($R_n$ vs $\rho$) for singly reinforced rectangular sections .... Note Set 11, 235
Areas of Bars per Foot Width of Slab – $A_s$ ........................................ Note Set 11, 236
ACI Provisions for Shear Design (Table 3-8) ....................................... Note Set 11, 239
Minimum Thickness for Two-Way Slab Systems ................................. Note Set 11, 243
Maximum Permissible Calculated Deflections (Table 24.2.2 ACI-318) .... Note Set 11, 246
Material Properties of the Base Material of Fabrics ............................. Note Set 13.1, 242
Properties of Fabrics ........................................................................ Note Set 13.1, 244
Mechanical Properties of Common Fabrics ........................................ Note Set 13.1, 246
Design Wind Pressures (Method 2) .................................................... Note Set 15.2, 263-265
Risk Category of Buildings and Other Structures for Flood, Wind, Snow, Earthquake, and
   Ice Loads .............................................................................................. Note Set 15.2, 266
Basic Wind Speeds for Occupancy Category II Buildings and Other Structures
   ............................................................................................................ Note Set 15.2, 267
Basic Gust Wind Speed (Residential) .................................................. Note Set 15.3, 272
Classification of (Residential) Building Enclosure Conditions .............. Note Set 15.3, 272
Lateral Wind Loads for Application to Vertical Projected (Residential) Wall and Roof Area ..............................................................................................................................Note Set 15.3, 273

Wind Uplift Loads for Application to (Residential) Roof System Horizontal Projected Area ..........................................................................................................................Note Set 15.3, 273

Design Wind Pressure for (Residential) Components and Cladding ..........Note Set 15.3, 274

Richter Magnitude .............................................................................................................Note Set 16.2, 289

Summary of Building Code Seismic Design Concepts ........................................Note Set 16.2, 296

Values of Site Coefficient $F_a$ .................................................................................Note Set 16.4, 307

Values of Site Coefficient $F_v$ .................................................................................Note Set 16.4, 308

Seismic Design Categories Based on Short Period (0.2 Second) Response Accelerations ......................................................................................................................Note Set 16.4, 308

Seismic Design Categories Based on 1-Second) Response Acceleration ..........Note Set 16.4, 308

Risk Targeted Maximum Considered Earthquake Ground Motion Response Accelerations of 0.2-Second Spectral Response Accelerations ........................................Note Set 16.4, 309

Risk Targeted Maximum Considered Earthquake Ground Motion Response Accelerations of 1-Second Spectral Response Accelerations ..........................................Note Set 16.4, 310

Seismic - Structural System Characteristics ...............................................................Note Set 16.4, 311-312

Occupancy Category of Buildings and Other Structures ........................................Note Set 16.6, 318

Seismic Zone Factor ........................................................................................................Note Set 16.6, 318

Seismic Response Modification Factor for Structural Systems ..................Note Set 16.6, 318

Timber Bearing Wall Resistance ($R$) ........................................................................Note Set 16.6, 319

Available Shear Strength of Bolts (Table 7-1) ..............................................................Note Set 17.1, 329

Available Shear Strength of Slip-Critical Connections (Table 7-3) ......Note Set 17.1, 329

Available Bearing Strength at Bolt Holes Based on Bolt Spacing (Table 7-4) .................................................................................................................................Note Set 17.1, 330

Available Bearing Strength at Bolt Holes Based on Edge Distance (Table 7.5) .................................................................................................................................Note Set 17.1, 331

Minimum Size of Fillet Welds .................................................................................Note Set 17.1, 333

Available Strength of Fillet Welds ...........................................................................Note Set 17.1, 333

Load Duration Factor, $C_D$ .........................................................................................Note Set 19.1, 346

Common Allowable Deflection Limits ....................................................................Note Set 19.1, 348

Column Stability Factor, $C_p$ .........................................................................................Note Set 19.1, 354
Section Property/Standard Sizes of Glued Laminated Timber ...........Note Set 19.1, 355
Section  ..................................................................................................................Note Set 19.1, 356-357
ASD Beam Design Flow Chart .................................................................Note Set 19.1, 358
Equivalent Glulam Sections for Dimension Lumber/Timber Beams ....Note Set 19.2, 370
Equivalent Glulam Sections for Steel Beams ..............................................Note Set 19.2, 371
Equivalent Glulam Sections for Laminated Veneer Lumber (LVL) ......Note Set 19.2, 371
Equivalent Glulam Sections for Parallel Strand Lumber (PSL).........Note Set 19.2, 371
Roof Beams – Construction Loads (Douglas Fir-Larch Glulam)........Note Set 20, 382
Safe Loads for Wood Columns .................................................................Note Set 20, 383
Allowable Shear in Pounds per Foot for Horizontal Wood Structural Panel Diaphragms
with Framing of Douglas-Fir Larch or Southern Pine............Note Set 20, 384
Allowable Shear for Wind or Seismic Forces in Pounds per Foot for Wood Structural Panel
Shear Walls with Framing of Douglas-Fir Larch or Southern Pine......Note Set 20, 386
Common Allowable Deflection Limits .....................................................Note Set 21.1, 393
Listing of W Shapes in Descending order of Z for Beam Design .......Note Set 21.1, 405-406
Available Critical Stress, \( \phi F_{cr} \), for Compression Members ..............Note Set 21.1, 407-408
Beam Design Flow Chart for Steel .........................................................Note Set 21.1, 409
Allowable Flexural Tensile Stresses for Clay and Concrete Masonry....Note Set 23.1, 459
Balanced Section Properties for Rectangular Masonry Sections with Tension
Reinforcement ..........................................................Note Set 23.1, 462
Section Properties for Concrete Masonry Walls.................................Note Set 23.1, 464-466
Presumptive Bearing Capacities from Indicated Building Codes .......Note Set 24.1, 476
